

## TVÅLFLINGAN

Apartment building at Telefonplan, Stockholm.

Tvålfvingan consists of 160 apartments distributed over 17 levels and three buildings, along with a parking garage and commercial facilities.

Unique facade elements of black and white concrete, together with wide windows in a variety of formations providing panoramic views, are the distinguishing characteristics of the buildings.

Selected parts of the concrete facades have photographic motifs cast into the surface to add a further dimension, making the buildings distinctive. Artist Mikael Göransson has collaborated with Kontur to create the motifs.

Apartments are characterized by varied views through the large panoramic windows, a clear distinction between public and private spaces, dynamic walk-around plans, and functional walls containing kitchens, closets and built-in workspaces.

Client: HSB Bostad
